Kickstart kode

Get data from csv

```python
import polars as pl
from os.path import join

data = pl.read_csv(join("path","to","file.csv"))
```

Get data from request

```python
import requests
import polars as pl
import io

response = request.get('https://example.com/path/to/data').content
raw_data = pl.read_csv(io.StringIO(response.decode("utf-8")))
```

Get data from SQL

```python
import polars as pl

host = "host"
user = "user"
password = "password"
port = "port"
db_name = "db"

uri = "mysql://{0}:{1}@{2}:{3}/{4}".format(user,password,host,port,db_name)
query = "SELECT * FROM foo"
pl.read_database_uri(query=query, uri=uri)
```
